## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election without traverse of Species VII, claims 200-209 in the reply filed on 11/18/04 is acknowledged.

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 200-209 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-21 of U.S. Patent No. 6,500,692. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-21 of U.S. Patent No. 6,500,692 recites the claimed method for forming a photosensor comprising forming a trench and performing a first and second ion implantation into the vertical internal surface region of the trench.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 2813

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 200-204, 209 are rejected under 35 U.S.C. 102(b) as being anticipated by Wong.

See Wong, figs. 1-8 and related text on col. 4-7 which discloses the claimed process for forming a photo sensor including the steps of forming a trench having a substantially vertical internal surface region within a semiconductor substrate; applying a passivation layer of oxide above the substantially vertical internal surface region (fig. 5); and performing a plurality of ion implantation including a first and second ion implantation into the opposite sidewall of the substantially vertical internal surface region at a first and second ion implantation angle (fig. 7, col. 7, step 10).
